

# Create React app

And install first modules

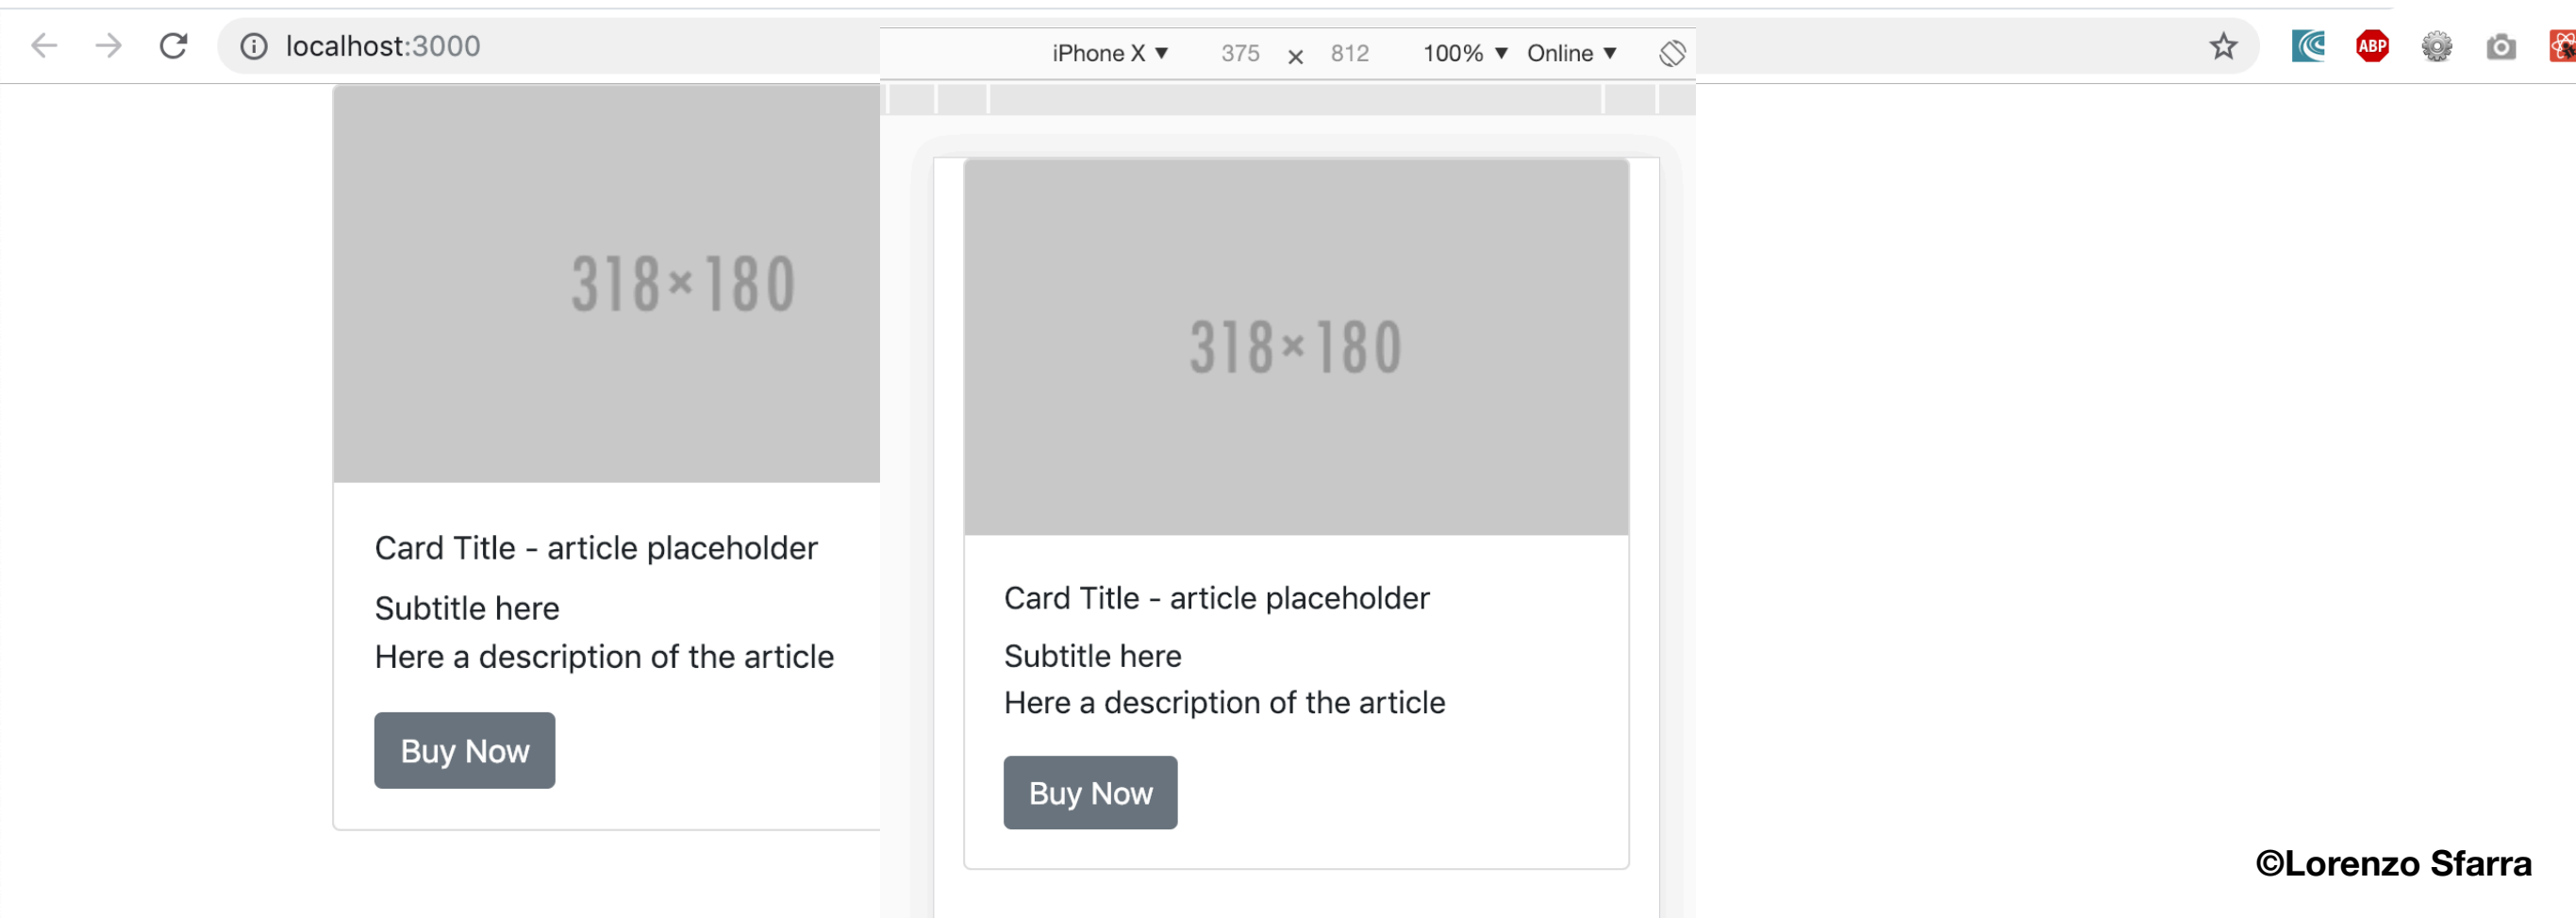

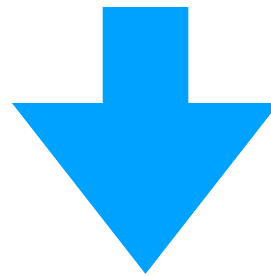

```
$ npm init react-app ecommerce-ui  
$ cd ecommerce-ui  
$ npm i --save bootstrap reactstrap react-dom
```

Easy to use React Bootstrap 4 components

Provides DOM-specific methods that can be used at the top level of your app and as an escape hatch to get outside of the React model if you need to.

# Reactstrap

```
$ npm run start
```

# Performing GET/ POST Requests

**AXIOS:** Promise based HTTP client for the browser and node.js

```
$ npm i --save axios
```

```
// Make a GET request  
axios.get('/myurl')  
  .then(function (response) {  
    console.log(response);  
  })  
  .catch(function (error) {  
    console.log(error);  
  });
```

# Styled components

 <https://www.styled-components.com/>

```
$ npm i --save styled-components
```

Using tagged template literals and the power of CSS, styled-components allows you to write actual CSS code to style your components.
